It used to be, but Jeff left our branch and now it is Scot.

Glad I asked. For some reason I was thinking it was Jeff Frithsen.

Hi Linda, I am including BaP team members' managers on an email as an FYI (since I will be stealing their staff!). Can you remind me who your immediate manager is?

Yes. I would just cc' their managers. Also cc' the iris management.

Probably best to have the BaP team at the meeting in person, right? The whole time? We might have to make sure the managers in NCEA-WA are good on this...three days is a long time!
I'll send out a reminder to my team members in the next day or two and perhaps I should CC: their managers so they are on board.

Do you want me there in person, or can I participate by telephone?

Hi Linda, thanks for checking in. I will in fact be at the SAB meeting. I'm giving a 30 minute presentation on Wed morning.

I keep meaning to send a reminder email to the folks that worked on BaP. I'm asking everyone to review the sections they worked on. There may be some questions on your section after my presentation and/or throughout the three day meeting, and sometimes the SAB panel asks us to clarify some points.

See you there!

-Kathleen

Kathleen – I see that the SAB meeting on BaP will occur next week. Is there anything you need from me before then? Will you be there? Linda

FYI, some folks from CalEPA came around to my SOT poster this year. They have shared a poster their group presented at SOT last year that includes some sample calculations using the draft BaP OSF and IUR. They didn't present any of their calculations for the dermal slope factors, but indicated that based on their assumptions it would drive the risk assessment.

Hi Kathleen,
It was good talking to you at the SOT meeting in San Diego.
The URL below should work. If not call or email me.

http://www.dtsc.ca.gov/AssessingRisk/upload/HERD_Poster_Benzo-a-pyrene-pdf.pdf

When I talked to you in San Diego, I couldn't remember exactly how we dealt with the dermal slope factor. After reading our poster again I remembered we didn't include any calculations with it because we didn't know what exposure parameters and other details would be apply. However, using what we thought might be appropriate assumptions, we ran a few sample calculations. They indicated that the dermal pathway would drive the risk assessment. I remember discussing this with several individuals from other organizations who indicated they had reached a similar conclusion. If you have any proposed guidance on how a dermal slope factor would be applied it would be of interest to us.

Thanks,

Mike

Hi Michael, it was good chatting with you at SOT. Thanks for stopping by my poster (I've attached a PDF copy in case you are interested).

You mentioned that recently your group put together a poster applying EPA's draft dermal slope factor to a hazardous waste site. I'd be interested in seeing that if you can dig up a copy.

Thanks!

-Kathleen
